Category: Narrative review

Indexing of Dental Clinics of North America (DCNA):

Scopus, ScienceDirect, EMBASE, CINAHL (Cumulative Index to Nursing and Allied Health Literature)

Summary and Significance:

This article presents a comprehensive review of the current concepts surrounding splint therapy, particularly in the context of temporomandibular disorders (TMDs). It aims to:

- (a) Clarify ongoing controversies related to splint design, indications, and duration of use.
- (b) Consolidate evidence-based practices to guide clinicians in making informed decisions.
- (c) Serve as a reference point for postgraduate students and practicing clinicians dealing with occlusal splints and related therapy protocols.

The publication contributes to both academic knowledge and clinical practice, supporting our department's commitment to evidence-based and up-to-date education in dental sciences. Also, it enhances the academic and research profile of our department and institution.
